### STEREO CASSETE DECK

## TD-R441TN TD-R442BK

A/B/C/E/G/J/U

# Area Suffix A . . . . Australia B . . . . U.K. C . . . . Canada E . . Continental Europe G . . . . . Germany J . . . . U.S.A. U . . . Other Areas

#### **FEATURES**

- 1. Full logic control mechanism
- 2. Silent quick-reverse mechanism
- 3. Electrically driven cassette holder
- 4. Dolby\* HX PRO headroom extension
- 5. Dolby B/C noise reduction system
- 6. Centralized display
  - · 2-color fluorescent peak level indicator
  - 4 digit linear counter/digital peak level and level meter display
- 7. Auto tape select mechanism
- 8. Adjustable bias
- 9. Timer start mechanism
- 10. DDRP (Dynamics Detection Recording Processor)

With the DDRP function, the recording level is adjusted automatically so that recording is performed in optimum condition.

#### 11. COMPU LINK-1/SYNCHRO terminal

#### 12. Other features

- 2 pairs of line input jacks including CD direct input
- High bias frequency of 170 kHz for improved recording
- Music Scan
- "Under license from Staar S.A., Brussels Belgium"
- Dolby noise reduction and HX Pro headroom extension manufactured under license from Dolby Laboratories Licensing Corporation. HX Pro originated by Bang & Olufsen.

"Dolby", the double-D symbol III and "HX PRO" are trademarks of Dolby Laboratories Licensing Corporation.

- TD-R441TN and TD-R442BK are the same in the specifications except the coloring, namely, TD-R441TN is Titanium color while TD-R442BK is Black color.
- The essential mechanism of the both versions is the same as that of TD-W505.

### Safety Precautions

- The design of this product contains special hardware and many circuits and components specially for safety purposes.
   For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
- 2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
- 4. The leads in the products are routed and dressed with ties, clamps, tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and/or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after re-assembling.
- 5. Leakage current check (Electrical shock hazard testing)

After re-assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna termianls, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

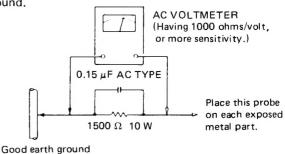

Do not use a line isolation transformer during this check.

- Plug the AC line cord directly into the AC outlet. Using a "Leakage Current Tester", measure the leakage current
  from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the
  chassis, to a known good earth ground. Any leakage current must not exceed 0.5 mA AC (r.m.s.).
- Alternate check method

Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500  $\Omega$  10 W resistor paralleled by a 0.15  $\mu$ F AC-type capacitor between an exposed metal part and a known good earth ground.

Measure the AC voltage across the resistor with the AC voltmeter.

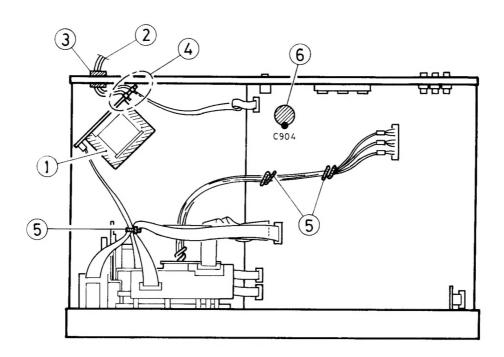

Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75 V AC (r.m.s.). This corresponds to 0.5 mA AC (r.m.s.).

### Warning

- 1. This equipment has been designed and manufactured to meet international safety standards.
- 2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
- 3. Repairs must be made in accordance with the relevant safety standards.
- 4. It is essential that safety critical components are replaced by approved parts.
- 5. If mains voltage selector is provided, check setting for local voltage.

### ■ Safety Precautions about TD-R441/-R442

J version : 5216507 (UL approved No.)

C version : VTP52A5-011F

2. Confirm the marking of the power cord and the plug.

Power cord

: SPT-1

Power cord plug

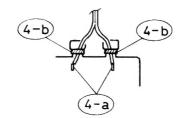

: KP-10 or SU-1

3. Install the cord bushing by the specified tool while confirming the marking.

Bushing : NIFCO 2271

- 4. a) When installing the power cord, wind it around the terminal by the end before soldering.
  - b) Arrange the wires while binding them nearby the terminal.
- When arranging every wire and cable, avoid the active power parts, mobiles, heat generating parts, sharpedged parts, etc.
- 6. For C904, make sure to use the specified part of the following rating.

C904 : 2200 µF/25 V

### NAMES OF PARTS AND THEIR FUNCTIONS

#### 1 TIMER switch

When an optional timer is used, recording and playback can be performed at any desired time. (See page 39).

- POWER switch
- 3 Cassette holder
- MULTI MODE display
  - 1) MEMORY Indicator
  - 2 Tape counter/digital peak indicator
  - **3 PEAK LEVEL METER**

0 dB: IEC (DIN) STANDARD LEVEL (250 nWb/m)

0 VU: EIAJ STANDARD LEVEL (160 nWb/m)

nWb/m)
□□: DOLBY NR STANDARD LEVEL

- 4 Mechanism mode indicator
- 5 Reverse mode indicator
- 6 Direction indicator
- 7 DDRP indicator
- 8 CD DIRECT input indicator
- 9 Tape types and recording guide indicators
- **5** INPUT LEVEL control
  - Adjust the recording level with this control.
- 6 REVERSE MODE switch
- MEMORY button
- (See page 19.)

  RESET button

Press to reset the tape counter to "0.00".

#### **9** DISPLAY MODE button

Select the digital counter mode. When the power is turned on, it changes the counter and if pressed this button, it changes digital peak indicator.

#### DIGITAL PEAK CALL button

Press to call up the stored (memorized) maximum value or to reset the memory, in the digital peak indicator mode (See page 25.)

This function is available when the display is set to the DIGITAL PEAK mode with the DISPLAY MODE button.

#### DOLBY NR switches

Set to B or C for recording using the Dolby NR system or for playing back a tape that was recorded using the Dolby NR system. Set to OFF when the Dolby NR system is not used.

#### CD DIRECT switch

ON: Press this switch to set to ON when recording directly from a CD player. OFF/LINE: Press this switch to set to OFF/LINE when recording from a stereo amplifier.

#### BIAS adjust control

Adjust recording bias according to the characteristics of the tape used for recording. (See page 27.)

#### **⚠** BALANCE control

Adjusts the balance between the signals input via the left and right LINE IN jacks. (See page 21.)

#### PHONES jack

Connect headphones (with an impedance of 8  $\Omega$  to 1 k $\Omega$ ).

#### Cassette operation buttons

- / ▲ STOP/EJECT: Press to stop the tape. Pressing this button after the tape stops, opens the cassette holder.
- ◄ (rewind): Press to rewind the tape.
- PLAY: Press to start recording/playback.

  Press this button with either the ◄◄ or

  ►► button for music scanning.
- (fast forward): Press to fast forward the tape.
- O REC/REC MUTE: Press the PLAY button while pressing this button to start recording, and press to leave an appropriate non-recorded section. (See page 29.)
- PAUSE : Press to stop the tape temporarily during recording and playback. Press the PLAY button to release the pause mode.
- DIRECTION: Press to change the direction of tape travel.

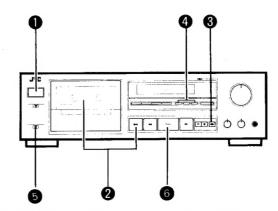

6 (No. 4330)

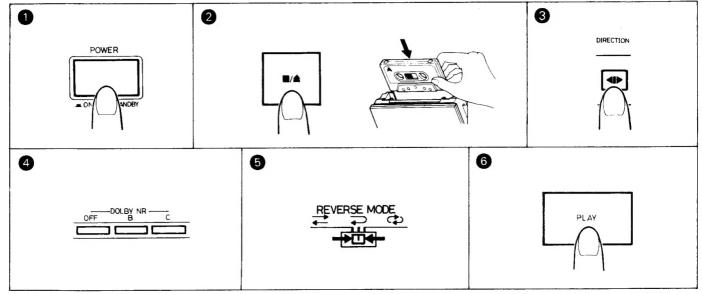

#### **PLAYBACK**

Operate in the order of the numbers in the illustration.

- Press the POWER switch to set to ON ( ).
- Load a prerecorded cassette with side A facing out.
- Select the side to be played back. Side A... Forward direction Side B... Reverse direction
- Press the same DOLBY NR switch that was pressed when the tape was recorded.
- Select the REVERSE MODE. (See page 35.)
- Press the PLAY button to start playback.
  - To stop playing back midway......Press
  - / 

    STOP/EJECT button.

Tape counter display

When the power is turned on, "0.00" appears on the display. When the tape runs, the counter functions as a linear tape counter. The running time is displayed in minutes and seconds (countdown function included). Since the counter is not a clock, there may be a discrepancy between the actual recording and playback times. This discrepancy will vary depending on the length of the tape and the hub diameter.

To set the counter to "0.00".

Press the RESET button. (The counter is also reset when the power is switched off and on again.)

Music scan

The music scan mechanism functions by detecting non-recorded sections between tunes. The lengths of non-recorded sections should be more than 4-5 sec for Music Scan to be effective.

- Press the PLAY and ◄ (or ►►) buttons simultaneously.
  - "PLAY" blinks when scanning.
- 2. When a non-recorded section is detected, playback starts automatically.

 Since this unit is equipped with an auto reverse mechanism, music scan is performed as follows according to the tape direction.

Direction	Operation button	When the PLAY and ◄ buttons are pressed	When the PLAY and ➤ buttons are pressed
<b>&gt;</b>	(Forward direction)	Previous or present tune	Following tune
<b>«</b>	(Reverse direction)	Following tune	Previous or present tune

#### Notes:

In the following cases, the mechanism may not operate correctly. This is not a malfunction; use the mechanism according to the type of program.

- Tapes with tunes having long pianissimo passages (very quiet parts) or non-recorded portions during tunes
- · Tapes with short non-recorded sections
- · Tape with noise or hum between tunes

#### **Memory button**

Press the MEMORY button at the point to which you want the tape to be rewound and from which you want to listen to during recording or playback.

The tape stops automatically at the point where the MEMORY button is pressed in either the fast forward or rewind mode.

- The point where the MEMORY button is pressed is stored during any mode (record-
- ing, playback or stop), but the memory function (automatic stop) operates only in the fast forward or rewind mode.
- If pressing the memory button again, the memory will be cleared. It will also be cleared if pressed the RESET button and reset the counter to "0.00".

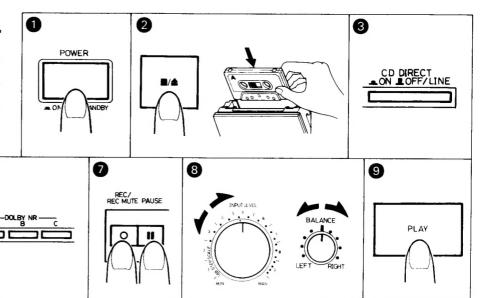

#### RECORDING

Operate in the order of the numbers in the illustration.

- Set the TIMER switch to OFF before switching the power on.
- Make sure the safety tab of the cassette has not been broken off.

6

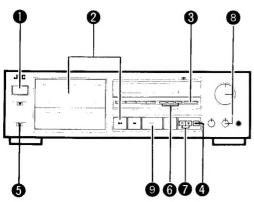

6

· Manual recording

DIRECTION

4

- Press the POWER switch to set to ON ( ).
- Load a cassette for recording with side A facing out.
- Select the recording input.
- Select the side to be recorded. Side A... Forward direction Side B... Reverse direction
- Select the REVERSE MODE. (See page 35.)
- Set the DOLBY NR switch as required.
- Press the PAUSE button and O REC/REC MUTE button at the same time (record-pause mode).

The REC and PAUSE indicators light.

- Adjust the recording level and balance. (See page 25.)
  - The BALANCE control only works with line input.
- Press the PLAY button to start recording.

#### WARNING

It may be unlawful to record or playback copyrighted material without the consent of the copyright owner.

### DDRP (Dynamics Detection Recording Processor) recording

- DDRP recording is performed with suitable JVC CD players and the recording level adjustment is performed automatically.
- Since recording level adjustment is performed automatically for different types of

tape (normal, CrO<sub>2</sub> and metal), the adjustment of INPUT LEVEL and BALANCE controls are not required.

 Read the instruction book of your CD player carefully.

#### **DOLBY NR and DOLBY HX-PRO**

#### **Dolby NR System**

To reduce the hiss inherent in tape recording, use the Dolby NR System when making recordings. When listening to a tape recorded with the Dolby NR System, set the DOLBY NR switch to B or C according to the system selected in the recording mode.

#### Note:

The sound quality will change if the positions of the DOLBY NR switch are different in recording and playback.

#### Dolby HX PRO headroom extension

When a source which contains many high-frequency components is recorded, these high-frequency signals have the same function as bias and therefore, the effective bias current changes. This will result in phenomena such as changes in the level of low-frequency signal and subsequent distortion and reduction of the high-frequency saturation level

Dolby HX PRO headroom extension system controls the bias current so that the effective bias is constant even when there are fluctuations in the high-frequency components of the input signal.

This greatly improves the high-frequency saturation level while reducing the low-frequency signal level variations and distortion.

- The dynamic sound recorded with this system sounds the same even when the tape is played back in a deck that does not have Dolby HX PRO.
- This system automatically works when in recording; however, Dolby HX PRO is not a noise reduction system.

### DIGITAL PEAK indicator and its use in recording level adjustment

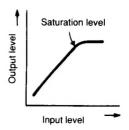

It is best to adjust so that the maximum sound level of the source to be recorded

reaches the very limit of the saturation level of the tape to be used.

- When the recording level is too low, the hiss noise inherent in the tape will be conspicuous.
- When the recording level is too high, exceeding the saturation level, the recording will contain cracking noise and will be distorted.

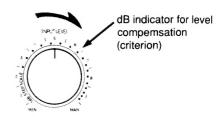

#### Saturation level means:

When the recording input is increased gradually, the output increases proportionally. However, once it reaches a certain level, the output cannot increase any further. Moreover, the output will be distorted if the input is increased beyond this point. The level at which this occurs is called the tape's "saturation level".

#### How to adjust the recording level

- Set to the record-pause mode.
- Adjust the recording level using the INPUT LEVEL control.

8 (No. 4330)

#### With metal tape

Because of metal tape's higher saturation level, it is OK that "+ 2" lights occasionally.

#### With normal or chrome tape

It is OK that "0" lights occasionally.

#### **Digital Peak Indicator**

When the counter mode is set to digital, the counter changes to a digital peak indicator. This is a digital display that shows the recording/playback level and is interlocked with the peak level meter under the control of the meter microcomputer. A maximum peak level memory function is provided so that the peak level can be checked after as well as during recording.

For 0 dB and under:

For +8 dB and over:

### Calling up the maximum level and reset-

When the DIGITAL PEAK CALL button is pressed once, the peak level held in memory flickers in the display for approximately 5 seconds. If the DIGITAL PEAK CALL button is pressed again while the peak value is displayed, the previous contents of memory will be cleared and this newly input maximum level will be held in memory as the peak level. In addition, the digital peak function holds the level of whichever of the left or right channels is the higher and displays it.

#### **Adjustment of Recording Bias**

There are various types of cassette tapes, and their characteristics differ slightly even when they are of the same type. Generally, the bias current and equalization characteristics suitable for the type of tape being used can be obtained by the Auto Tape Select system. However, to optimize the response of the tape to be used, it is better to adjust the recording bias so that distortion is minimized and the frequency characteristics are as flat as possible.

- Turn the BIAS adjust control clockwise (in the + direction) to increase the bias current; high frequencies are attenuated and distortion decreases.
- Turn the BIAS adjust control counterclockwise (in the - direction) to decrease the bias current; high frequencies are emphasized and distortion increases.

#### Notes:

- When adjusting the bias current, we recommend a source which makes it easy to check high frequencies, such as one containing cymbals. When you can hear the noise between tunes in FM broadcasts, be sure to adjust the recording level to below –10 dB.
- Because of the different characteristics of cassette tapes, adjusting the bias with the BIAS adjust control has more effect on the frequency characteristics of normal and high bias tapes than metal tapes.

#### **Erasing**

When recording on a prerecorded tape, the previous recording is automatically erased and only the new program is recorded on the tape. To erase a tape without making a new recording... Follow the section "RECORD-ING" but in step , set the INPUT LEVEL control to MIN.

#### **Automatic record muting**

This facility is used to eliminate undesired sections and leave an appropriate non-recorded section.

- A. To leave non-recorded sections of about 4-5 seconds automatically
- When the undesired section comes during recording, press the O REC/REC MUTE button and release it.
- The REC indicator flashes and a nonrecorded section is made during record muting operation.
  - About 4-5 seconds later, the tape automatically stops, and the unit enters the record-pause mode.
- Press the PLAY button to start recording again.

### B. To leave non-recorded sections of more than 4-5 seconds

- Keep the O REC/REC MUTE button pressed continuously as long as you want to make a non-recorded section. By releasing the finger from the button after the above operation, the unit enters the record-pause mode.
- Press the PLAY button to start recording again.

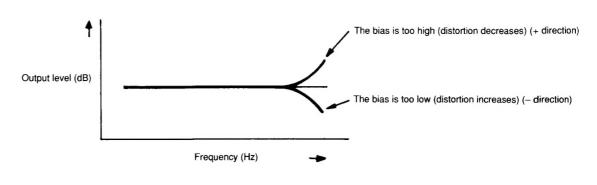

### C. To leave non-recorded section of less than 4 seconds

- When the undesired section comes during recording.... After the O REC/REC MUTE button is pressed, press the PLAY button before the unit enters the pause mode to start recording again, or press the PAUSE button to enter the record-pause mode.
- The PEAK LEVEL INDICATOR lights even during record muting according to the input level which can be heard from the speakers or headphones so that recording can be resumed at the exact point on the tape.

#### **CD DIRECT input**

When a CD player or other component is connected to the CD DIRECT terminals as shown in "CONNECTIONS" on page 11, a direct signal will be input without passing through the stereo amplifier.

Also, since the BALANCE control of the deck is no longer be concerned, the signal path will be shortened and sound quality can be improved. To record with these sources, set the CD DIRECT switch according to the input.

#### **AUTO-REVERSE**

- Press the DIRECTION button to select the tape transport direction.
- In the following explanation, side A is loaded into the cassette holder facing out (toward you).

Reverse mode	Explanation	Tape direction indicator
Continuous  REVERSE MODE	(Playback ony)  Start  Forward direction (side A)	<b>≫</b>
	Reverse direction (side B)  • During recording, the tape stops automatically at the end of side B.	<b>«</b>
	Forward direction (side A)	
Full REVERSE MODE	Start Reverse direction (side B)	<b>&gt;&gt;</b>
******	Auto-stop  When the tape is played or recorded in the reverse direction (side B), only side B is played back or recorded and then the tape stops automatically.	<b>«</b>
Single	Only forward direction (side A)  Start  OUCH Auto-stop	<b>&gt;</b>
	Only reverse direction (side B)  Auto-stop  Start	<b>«</b>

A quick reverse auto reverse mechanism is provided in this deck. With this system, an infrared sensor detects light reflected from the splicing tape between the coated tape and leader tape to switch the tape travel direction.

In case of a cassette without leader tape, the direction is changed automatically at the end of tape.

- Due to the inevitable variation in cassette shell construction, it is recommended that tapes recorded in the forward direction on one side be played back in the forward direction on the same side to assure stable sound reproduction.
- During recording, auto reverse can be activated only from the forward to the reverse direction.

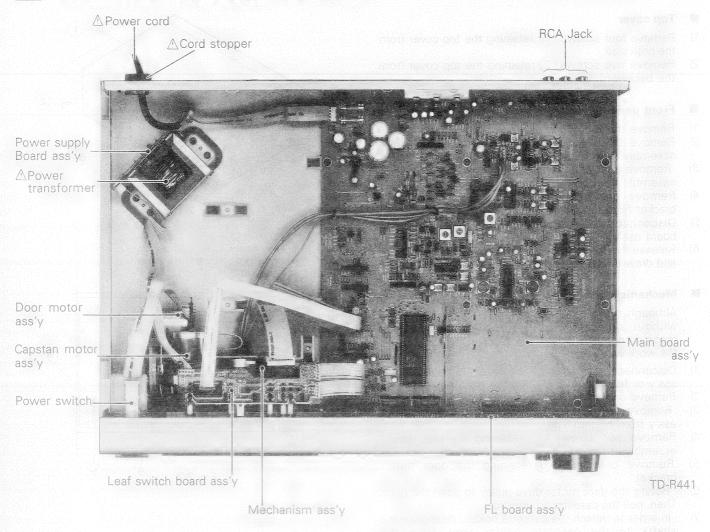

For satisfactory sound quality and to avoid accidental erasure of previously recorded

material, it is recommended to always use cassettes with side A facing you.

#### Notes

- For about 15 seconds, after entering either the record or playback mode, the auto reverse mechanism will not function since the infrared sensor is designed not to function during this period.
- To avoid malfunctioning of the infrared sensor, do not expose the head section to direct sunlight.
- To avoid malfunctioning of this unit, do not use wrinkled tape.
- Due to the location of the infrared sensor, when the operating mode of the deck switches from the reverse direction to the forward direction at the end of the tape, the leader section of tape passes by the head, resulting in about a 1-second blank interval in the sound being listened to.

### 1 Location of Main Parts 1 mis 1/2 10 love 1999

### **Removal of Main Parts**

#### Top cover

- Remove four screws (1) retaining the top cover from 1) the both side.
- Remove two screws (2) retaining the top cover from the backward.

#### Front panel assembly

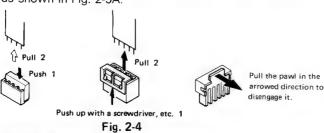

- Remove the top cover 1)
- Remove three screws (4) retaining the front panel 2) assembly from bottom side.
- Remove two screws (3) retaining the mechanism assembly from bottom side.
- Remove one screw (5) retaining the door motor bracket from top side.
- Disconnect connector CN616 in the headphone board ass'y.
- Release the front panel from the pawls of the chassis and draw it to the front side.

#### Mechanism assembly

Although the mechanism assembly can be removed without detaching the front panel ass'y, it is recommended to detach the front panel ass'y to do the work with ease.

- Disconnect all connectors between the mechanism ass'y or front panel ass'y and the main board.

  Remove one screw 6 retaining the door damper.
- Remove two screws (3) retaining the mechanism ass'y from bottom side.
- Remove two screws (7) retaining the mechanism 4) assembly at top side.
- 5) Remove one screw (5) retaining the door motor bracket.
- 6) Rotate the door motor drive pulley to open the door. Then, pull the cassette lid upward.
- In order to detach the cassette holder, disengage the shafts to the cassette holder arms from the mechanism holder. (Use an ordinary (-) screw driver as shown in Fig. 2-5A.

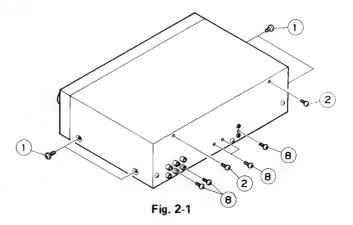

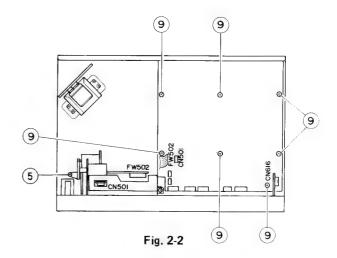

Reassembling manner of cassette holder

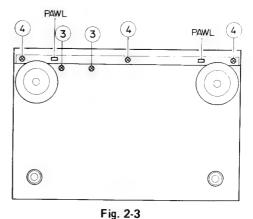

- 1) Insert the cassette holder into the mechanism holder while keeping the stabilizer parallel with the holder, and put together so that the cassette Quide and the inner face of the stabilizer contact with each other.
- 2) Engage them together with by 3 shown in the figure.
- (At that time, press arms lightly toward the cassette holder.) 3) Set respective shafts of the
- cassette holder arms into the holes 2 and 1 of the mechanism holder by use of a screwdriver, etc.

4) Attach the door damper 12 (No. 4330)

#### Removing manner of cassette holder

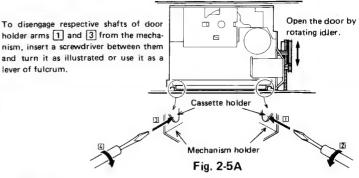

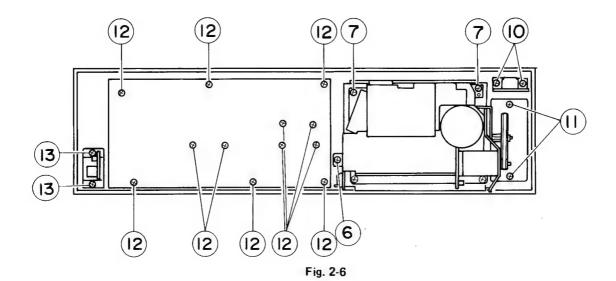

Fig. 2-5

#### Main board assembly

- 1) Remove the front panel ass'y.
- 2) Remove five screws (8) retaining the Jacks and heat sink from rearward.
- 3) Remove seven screws (9) retaining the Main board ass'y.

#### Power switch assembly

1) Remove two screws (10) retaining the power switch.

#### ■ Timer/Reverse mode switch assembly

 Remove two screws (1) retaining the Timer & Reverse mode switch board ass'y.

#### ■ Volume/FL indicator/Key switch board

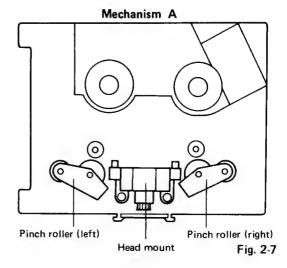

- 1) Remove the knobs (Input, Bias, Balance)
- 2) Remove twelve screws (12) retaining the volume, FL Indicator and Key switch board ass'y.

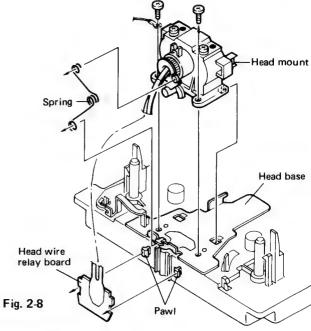

#### ■ Head phone Jack ass'y

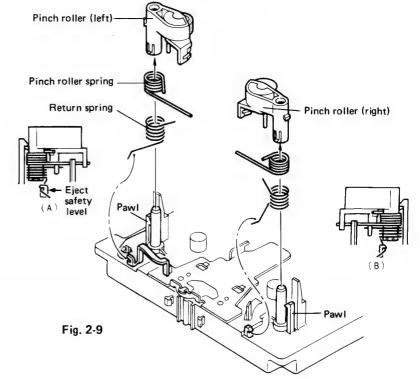

Remove two screws (3) retaining the head phone Jack bracket.

#### Cassette mechanism section

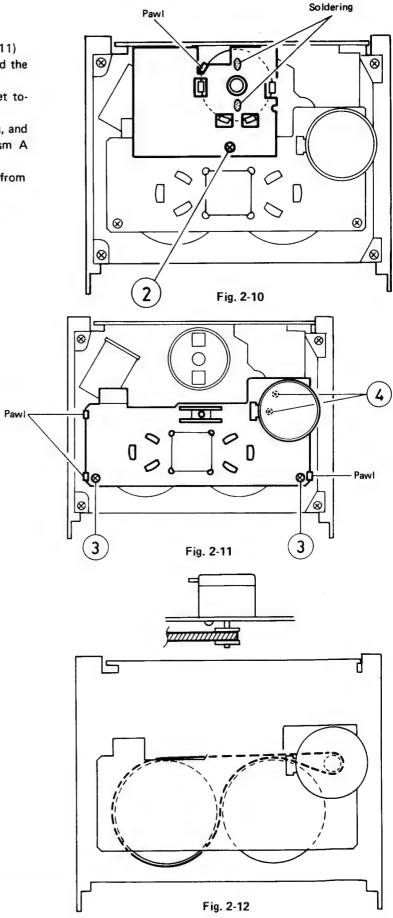

- Head mount assembly (Fig. 2-7, Fig. 2-8)
- 1) Release the head wire relay board from two pawls.
- 2) Remove two screws 1 retaining the head mount ass'y from the head base.
- 3) Remove the head gear (1) and head spring.
- Pinch roller assembly (Fig. 2-7, Fig. 2-9)
- 1) Remove return spring by disengaging the pawl hooking it.
- 2) Remove the pinch roller spring.
- 3) For reengaging the spring, refer to the figures (A) and (B).

- FM bracket/Capstan motor assembly (Figs. 2-10, 2-11)
- Remove soldering to separate the drive motor and the motor ass'y. (Mechanism A or B)
- 2) Remove one screw 2 retaining the FM bracket together.
- 3) Remove two screws 3 and disengage five pawls, and then the FM bracket and the capstan belt (mechanism A and B) can be removed.
- 4) Remove two screws 4 retaining the capstan motor from the FM bracket.
- 5) For reengaging the capstan belt, refer to Fig. 2-12

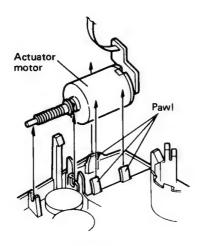

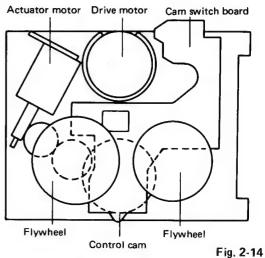

Fig. 2-13

- Actuator motor assembly (Fig. 2-13) Release the actuator motor ass'y from three pawls.
- Flywheel assembly (Fig. 2-14, Fig. 2-15) Remove washers from the capstan shaft and draw them out.
- Drive motor (Fig. 2-13, Fig. 2-16)
- 1) Pull out the gear and arm assembly from the drive motor shaft.
- 2) Remove a screw 5 retaining the drive motor.
- 3) Disengage four pawls to release the drive motor.

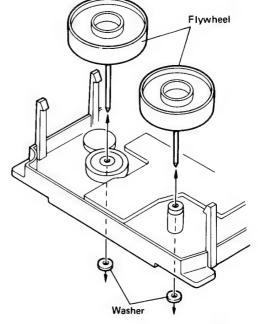

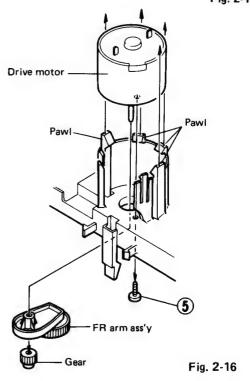

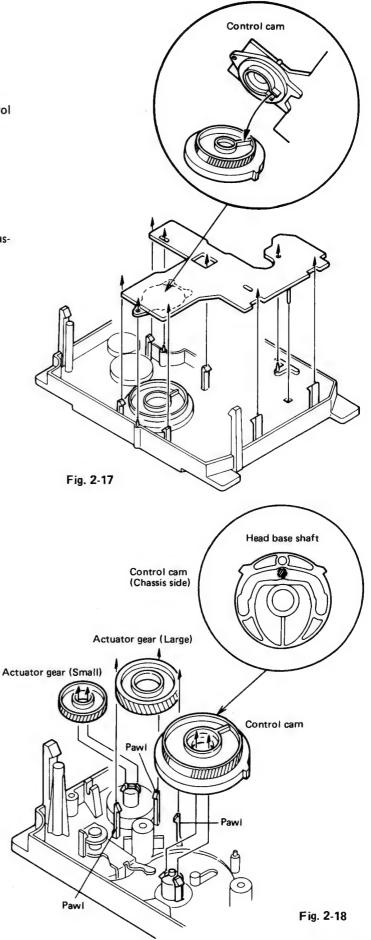

Fig. 2-15

- Cam switch board (Fig. 2-14, Fig. 2-17)
- 1) Release the cam switch board from six pawls.
- 2) For gearing between the cam switch board and control cam, see the magnified illustration in a circle.
- Actuator gear (large) (Fig. 2-14, Fig. 2-18)
  Release the actuator gear (large) from three pawls.
- Control cam (Fig. 2-14, Fig. 2-18)
- 1) Release the control cam from two pawls.
- 2) For assembling the control cam, see the magnified illustration in a circle.
- Actuator gear (small) (Fig. 2-14, Fig. 2-18)
   Release the actuator gear (small) from two pawls.

### 3 Main Adjustments

#### 1. Measuring instruments required for adjustment

- (1) Low-frequency oscillator (oscillation frequency 50 Hz -20~kHz , 0 dB output with 600  $\Omega$  impedance)
- (2) Attenuator (600  $\Omega$  impedance)
- (3) Electronic voltmeter
- (4) Standard tapes

VTT712 (tape speed, wow and flutter measurements)

VTT724 (reference level)

TMT735, VTT739 (playback frequency)

TMT704 (12.5 kHz) (Azimuth)

(5) Recording reference tapes

TS-12 (UD1), TS-10 (SA), TS-11 (MA) or equivalent (Use the standard tapes specified by this department.)

- (6) 600  $\Omega$  resistors (for attenuator matching)
- (7) Distortion meter (bandpass filter)
- (8) Torque gauge (cassette) for CTG-N mechanism adjustments
- (9) Wow & flutter gauge
- (10) Frequency counter gauge

(11) M300 gauge

(12) Band pass filter

(13) Standard position of the switch and volume knob

Switches and volume knobs
INPUT LEVEL : MAXIMUM
BALANCE : CENTER
DOLBY NR : OFF
TIMER : OFF

REVERSE MODE : 

BIAS ADJUST : CENTER INPUT SELECT : LINE

#### Tape guide adjustment method

Reflection position (guide post)

Direction of gauge movement

Use the jig to move in the direction of the arrow.

Fig. 3-1

#### ■ Mechanical Adjustments

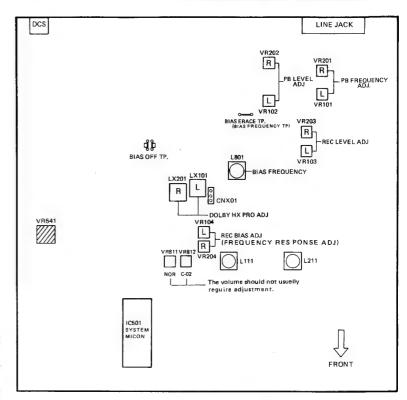

After head replacements, use the following method to check after the height, direction and tilt (rough) of each head have been adjusted.

#### Tape travel adjustment

Use the M300 gauge. Be sure not to damage the head.

Item	Tape to be used/jig	Standard	Adjustment and checking method	Adjusting points
Azimuth adjustment (1)	Test tape VTT704	Phase deviation should not occur when the output is maximum.	Adjust the FWD side and then the REV side.	FWD side REV side

Item	Adjustment	Adjusting point	Standard value	Remarks
Adjusting motor speed	Connect an electronic counter to the LINE OUT terminals. Play back the VTT712 test tape. Adjust the normal speed to 3000 Hz with VR541.	NORM: VR541	NORM speed: 3000 ± 15 Hz	Measure near the tape end of the test tape on the side A.
Checking wow and flutter	Connect a wow and flutter meter to LINE OUT terminals. Play back the VTT712 test tape. Check to see if the reading of the meter is within 0.18% (WTD).		Less than 0.18% (WTD)	If the reading becomes moving value even if conforming to the standard, a reclaim may be raised. Repairs are necessary.
Checking playback torque	Employ a torque testing cassette tape for the checking, or remove the cassette cover and use a torque gauge.		27–60 gr-cm	If the standard torque is not obtained, replace the take-up disc assembly.
Checking fast forward torque	Measure the torque in the fast forward mode in the same manner as in the above.		90–200 gr-cm	
Checking rewind torque	Measure the torque in the rewind mode in the same manner as in the above.		90–200 gr-cm	

#### ■ Electrical Circuit Adjustment Procedures

Make the following adjustments after the tape travel and head angle adjustments.

- In principle, the adjustments should be made in the order described.
- Adjustments required after head replacement are marked with an asterisk (\*).

0 dBs = 0.775 V

	Item		Adjustment and check methods		
1	Dolby circuit			Frequency Level	Output Value and Deviation
	recording check (record mode) Record		INPUT : LINE IN (-8 dBs)	1 kHz Cal. –40 dB	+5.7 dB ± 2 dB
		Record Dolby B		5 kHz Cal20 dB	+3.5 dB ± 1.5 dB
		Boilby B		1 kHz Cal.	0 dB <u>+</u> 9.5 dB
		Record Dolby C	1 kHz Cal40 dB	+16.2 dB +3 dB	
	Record Dolby C		5 kHz Cal20 dB	+2.9 dB ± 2.5 dB	
		1 kHz Čal,	0 dB ± 1 dB		

	Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
*2	Reference level	In playback of the VTT724, referring to the LINE OUT level is as -8 dBs, all other input and output levels respectively meet the standard value.		LINE OUT:—8 dBs PHONES OUT: —24 dBs LINE IN: —20 dBs ± 2 dB	Input volume: Max. Balance volume: Center Dolby NR: OFF DDRP SW: OFF
*3	Playback level adjustment	1) Play the VTT724 (1 kHz) test tape and adjust V R102 and V R202 so that the LINE OUT output is -7.5 dBs (the L-R channel output difference must be 0.5 dBs or less).  2) Headphone output check: -24 dBs +2.5 dB L-R difference: 2 dB or less	VR102, VR202	-7.5 dBs ± 0.5 dB -24 dBs +2.5 dB	The playback level changes when the head is replaced and must be adjusted. Use an electronic voltmeter with an impedance of 100 $k\Omega$ or more.
*4	Playback frequency response adjustment	Play the VTT735 (1 kHz, 12.5 kHz) test tape and adjust VR101 and VR201 so that the output value is standard at 1 kHz and 12.5 kHz.	VR101, VR201	With 12.5 kHz as reference, 0.5 ± 0.5 dB at 1 kHz 63 Hz : +2 ± 3 dB (check)	NR: OFF VTT739 can be used for TMT- 735 tape. However, there is a little difference in their specifi- cations as follows: TMT735 (1 kHz, 12.5 kHz) VTT739 (63 Hz, 1 kHz, 10 kHz)
*5	Bias frequency adjustment	Connect the frequency counter to the C822 lead through a 1.0 $\mbox{M}\Omega$ resistor, then adjust L801 so that the counter reads 85 kHz.	L801	85 kHz ± 1 kHz	Tape: METAL (Attach a probe to the mea- suring instrument lead termi- nal and plug in the connector plug.)
	HX PRO coil adjustment	In the METAL position recording mode, adjust LX101 and LX201 so that the CNX01(1-2 PIN) and CNX01(2-3 PIN) voltages are minimum.	LX101 LX201	Minimum output value	DC voltmeter Minimum value

	ltem	Adjustment Method	Adjustment Location	Standard Value	Remarks
*7	Recording/ playback frequency adjustment	Record 1 kHz at the Ref. —20 dB input, then record 63 Hz and 12.5 kHz and adjust VR104 and VR204 so that the difference between the 63 Hz and 12.5 kHz outputs is the standard value in relation to the 1 kHz output during playback. (Basically, adjust so that the 1 kHz and 12.5 kHz outputs are the standard values.)	VR104 VR204	With 1 kHz as reference, 0.5 ± 0.5 dB at 12.5 kHz 0 dB ± 3 dB at 63 Hz (NR : OFF)	Ref20 dB value: -20 dB below the reference input value ≒ -28 dBs.  Also adjust for normal tape and the left and right channels.  • The bias value is set in accordance with the voltage shift for normal at chrome
		Low Bias Current Low Bi	Bias High High	opriate Current Bias Current Range Rise uency	<ul> <li>when the bias current is not correctly adjusted, the recording characteristics will become as shown on the left.</li> <li>Perform the adjustment with the BIAS volume set to the center position.</li> </ul>
8	Bias volume variable check (Ext. VR)	In recording of 10 kHz input signal at the Ref20 dB level, turn the bias VR in '+' (increase) and '-' (decrease) directions and confirm the following by playing back the recorded section.  • When VR turned to '+': 10 kHz signal level decreases,  • When VR turned to '-': 10 kHz signal level increases.			
*9	Recording/ playback sensitivity adjustment	<ol> <li>Input to the LINE IN terminal so that the source monitor output is -7.5 dBs.</li> <li>Adjust VR103 and VR203 so that the recording signal current is -8 dBs during recording and playback.</li> <li>Perform the adjustment with the BIAS volume set to the center position.</li> </ol>	VR103 VR203	Normal: -7.5 dBs ± 0.5 dB Chrome, Metal: -8 dBs ±2 dB	The right and left level difference must be 1 dB or less for both normal and metal. Make adjustment by using normal tape, and make sure that the level fluctuation for chrome and metal tapes is within 1.5 dB, and that the right-left level difference is within 1.0 dB.
10	Maximum output check	Supply 1 kHz signal to the LINE IN terminal in the Rec. monitoring mode, and read non-clipped signal level at the LINE IN terminal.		LINE OUT: more than -8 dBs PHONES OUT: more than -16 dBs	
11	DDRP check	With the DDRP switch set to ON, supply 1 kHz, -20 dBs input signal in the Rec Pause mode and check the signal level at the LINE OUT terminal.  With the DDRP switch set to OFF, perform the same check as in the above step.	-	Normal: -20.2 dBs ± 2 dB Metal: -17.2 dBs ± 2 dB Normal: -8 dBs ± 2 dB Metal:	Input volume: No change even when VR is turned. DDRP indicator: Lights.  Input volume: Max. position DDRP indicator: Goes out.
13	Recording/ playback distortion check	1) Record a 1 kHz signal so that the LINE OUT output is -8 dBs and the level indicator is +0 dB. 2) Use a distortion meter to check if the output is the standard value during playback.		-8 dBs ± 2 dB  Normal tape: 2.0% or less Chrome tape: 3% or less Metal tape: 3% or less	Check after adjusting the bias current and recording level.

	Item	Adjustment Method	Adjustment Location	Standard Value	Remarks
14	Recording/ playback S/N ratio check	<ol> <li>Record a 1 kHz, 0 dB input and then remove the input and record without a signal.</li> <li>Play back this recording and measure the difference between the 0 dB recording and no-signal recording. The standard values must be satisfied.</li> </ol>		Normal: 42 dB or more Chrome: 43 dB or more Metal: 43 dB or more	
15	Erase ratio check	<ol> <li>Apply a 1 kHz signal from LINE IN and adjust the INPUT LEVEL knob so that the input level is -8 dBs.</li> <li>Increase the signal level to 20 dB and record.</li> <li>Rewind and erase the recorded section of the tape.</li> <li>Measure the output ratio between the signal and no-signal sections of the tape with an electronic voltmeter.</li> </ol>		55 dB or more	Connect a B.P.F. (band pass filter) between the deck and the electronic voltmeter.  1 kHz 0 VU Perase  1 kHz  Band pass filter (B.P.F.)  Electronic voltmeter
